

On Chanukah we learn how one tiny drop of oil, only enough to light a flame for one day, lasted for 8 whole days, enough time for new oil to be brought to the temple. This was a miracle.

We can help create a miracle today. If we change from a normal light bulb to an energy efficient light bulb our light will last over 8 times longer. This will help slow down the effects of climate change.

There are many other things we can do to help our environment. Think of the ways you can help and write a different action in each of the Chanukah candles below. An example has been done for you.

Colour in your Chanukah and display it in your school. This way other pupils can learn how they can help the environment.
